

Seven Great Reasons to Subscribe to HHIE's Health eNet

Be a part of the next evolution in electronic health records.
 One login. More data from more sources. One inclusive fee.

This translates into greater efficiency, improved productivity, and better patient outcomes.

1

Lab Results CHR

- One interface works across the board
- All outpatient results from Clinical Labs of Hawaii and Diagnostic Lab Services, regardless of who orders the test
- Real-time lab results
- Health eNet subscription includes all updates, development and support

EHR

- Two interfaces required to receive lab results
- Limited lab results
- Most show only what was ordered, not other providers' results, even if on the same EHR
- Delayed lab results (in a typical 2-3 daily scheduled delivery)
- Annual updates required
- Development and support costs

2

Medication Query CHR

- Multiple data contributors
- Includes Mail Order Rx
- Shows when patient picked up order

EHR

- Limited access from benefit manager
- Shows only that pharmacist wrote the order, not if patient picked it up or what other providers have ordered

3

Operative Reports, Discharge Summaries, Pathology Reports CHR

- All op, discharge and path reports viewable in one place
- Cuts costs, save time and need for follow-up

EHR

- Multiple logins needed from numerous hospitals to view all op, discharge and path reports

4

Face Sheets CHR

- Health eNet has access to hospital FS
- Includes updated insurance information

EHR

- No access to hospital FS
- Must send FS by fax or login separately to each hospital

5

Quality Measures CHR

- Access to public health data
- CCD can be created, exported and uploaded into your EHR for maximum data, including labs

EHR

- Limited access to data
- Interface has additional cost
- Results must be keyed in manually to get structured data

6

Transitions of Care Direct Secure Messaging CHR

- Instant database of our DSM addresses
- Attach and send a CCD
- Send CCD to public health registries

EHR

- HISP required for additional fee
- Limited; both parties must have an HISP and direct secure address
- Testing is strongly advised
- IT vendor required for setup, testing, maintenance and support

7

Transitions of Care Electronic Referrals Network CHR

- Refers across all EHR systems
- Attach and send a CCD
- Less time spent calling, faxing, leaving messages, waiting for call back, etc.
- Monitor a referral in process: when accepted, scheduled, completed
- One-to-one conversation between referring and receiving providers

EHR

- Must fax the referral to each EHR
- No instant feedback on whether fax was received. Must call to confirm
- Doesn't count toward Meaningful Use as an electronic HIE
